## Revised features:

- User creation and login w/ password recovery
- o User's personalized calendar landing page
- o Static events w/ recurring capabilities
- o Dynamic projects that are allocated for the user on the fly
- Basic calendar functionality (switch the current view of week/month/year)
- o Allow users to customize the look of events and projects

## Architecture Diagram

## Frontend Design

- Standard login and registration page
- Main user calendar page:

- WebService Design
  - GMail API
    - Used for sending password recovery codes to users, allowing them to securely change their password if they forgot their old one.
    - Used to send Email reminders to users about upcoming project due dates.
- Backend Desing
  - Each user is stored in a User schema in MongoDB. All data related to their calendar and login info is saved in this schema.
